

EntityDAC Express Patch With Serial Key X64

EntityDAC Express Torrent Download has three main components: EntityDAC, LINQ and DatabaseTool. EntityDAC is the database layer of the software, which was added to support LINQ queries. Here, developers will access the database as if it were a set of classes, with the ability to enforce CRUD operations and extract entity classes. The language integrated query, LINQ, can be used to process data types and object collections. Developers can rely on an advanced framework for complex comparisons and customizations. Datatype support includes the following: Single Value, String Multivalued, Array, record Object, Variant Datatype conversions: Boolean to Integer Boolean to Double Date to String Integer to String Double to String String to String IEEE to String String to IEEE String to Integer Double to IEEE IEEE to Double DateTime to String String to DateTime DateTime to IEEE IEEE to DateTime To support LINQ, EntityDAC consists of several components: an object model, runtime and console. The object model comprises class declarations, which are presented in the project's Designer by using the Entity Data Provider. Runtime provides several providers, such as SQL Server, Oracle, MySQL, Firebird, PostgreSQL and SQLite. EntityDAC's LINQ module lets programmers create queries by using a query template engine. DatabaseTool is the component that supports the creation of database or schema components. Supported Databases: Microsoft SQL Server 2008 MySQL 5.1 Access 2008 PostgreSQL 9.1 Oracle 10g InterBase 6.0.2 Show More... AxElemSoft.AxElemSoft.ADO is a tool that helps developers in writing modular and modularized applications that are independent of databases. This platform provides support for a wide range of databases, including Oracle, MS SQL Server, MySQL, Access, Postgres, and more. With AxElemSoft.AxElemSoft.ADO, it is possible to set database independent modules for developing modular applications. This platform comes with a full suite of components that allow for the development of applications independent of database management systems (DBMS). Users can choose a database from any supported DBMS at run-time. AxElemSoft.AxElemSoft.ADO can be used together with any third party library such as the ADO, CDM, OR

EntityDAC Express allows developers to use an OOP approach to database access and integrate EntityDAC with third-party applications. It allows users to separate client codes from the database procedures, thus providing clients and applications with a clean API. The core features of this tool can assist users in performing OOP programming and accessing a database by using EntityDAC models. EntityDAC Express helps speed up your application using the following features: Features: EntityDAC Express Features: • A set of directives that support you in SQL Server, Oracle and Firebird databases, such as Stored Procedures, Stored Procs, Functions, Triggers, Views, Indexes, Parameter Bindings, T-SQL Call Flow, SQL DML Statements, Query Flow, Stored Procedure Triggers, SQL-Based Stored Procedure Triggers, Object Oriented Programming (OOP) and Inheritance. • A set of directives that support you in MySQL databases, such as Stored Procedures, Stored Procs, Functions, Triggers, Views, Indexes, Parameter Bindings, T-SQL Call Flow, SQL DML Statements, Query Flow, Stored Procedure Triggers, SQL-Based Stored Procedure Triggers, Object Oriented Programming (OOP) and Inheritance. • Connection Templates that allow you to load the entity classes required for future insert, update or delete operations by using the same SQL Statement, thus allowing you to write less and create a single line of code for each SQL Statement. • Load and save objects from the database by using EntityDAC, thus allowing you to work with these objects by using the resulting Entities. This allows you to add new objects by using the EntityDAC Designer to the system. • Save, delete, update and generate entity classes with the EntityDAC Designer. • User-defined types (UDT) support with a set of directives, including Supported Types, Key Properties, Value Properties, Persistent and Generated Properties. • Nested transactions with the EntityDAC.Begin and EntityDAC.Commit methods. • Ability to split codes generated from the template into the three different development phases (Model, View and Controller). • Ability to create and work with EntityDAC and EntityDACTests with different models; including the EntityContainer, ObjectDef, ObjectDefs and ObjectDefTests, which contain the EntityModel, EntityDef, EntityDefs and
